Guidelines for proper use and longevity of your Magnetic Detacher

* Do not drop the detacher, as it could crack the magnets located inside the steel housing.

* It is recommended that the detacher be secured to the surface of a counter or other workspace using flat head screws, a machine screw with a nut, or a wood screw. The screws should be #8 diameter.

* Do not mount the detacher on metal. Over time the metal could deter from the magnetic strength.

* Keep the detacher away from extreme heat so as not to damage the specialized magnets located inside the steel housing.

* Never put a detacher on top of a computer. As with all magnets, this could cause damage to computer drives.
